Planets in solar system

- Names of planets in our solar system
  - Mercury
  - Venus
  - Earth
  - Mars
  - Jupiter
  - Saturn
  - Uranus
  - Neptune

Members of solar system

Major bodies
- Sun
- planets
- satellites

Small bodies
- asteroids
- comets

Even smaller objects
- interplanetary dust particles

Theorem and definition

Theorem

The sum of the squares on the legs of a right triangle is equal to the square on the hypotenuse.

Definition

A planet is a celestial body that (1) is in orbit around the Sun, (2) has sufficient mass to assume hydrostatic equilibrium (a nearly round shape), and (3) has ``cleared the neighbourhood'' around its orbit.

Code

```python
1  def add_two_numbers (a, b):
2      # adding two numbers
3      c = a + b
4      # returning a+b
5      return c
6
7  # calculation
8  x = 2
9  y = 3
10 z = add_two_numbers (x, y)
11
12 # printing result
13 print (f'{x} + {y} = {z}')
```
